

# Improving research culture - confidence in qualitative assessment methods

@KarenStroobants

#ResearchCulture #ReformingRA

Research assessment reform is a central lever to **improving research culture**

Exploring qualitative methods presents **opportunities** for better assessing how research is done, but **challenges** remain

Basing assessment primarily on **qualitative assessment methods** is central to current reform

*Research assessment reform  
is a central lever to maximising research  
quality and impact and to improving  
research culture*

# Research culture – how research is done

*‘Research culture encompasses the behaviours, values, expectations, attitudes and norms of our research communities. It influences researchers’ career paths and determines the way that research is conducted and communicated.’*

# Narrow definitions of success are a core cause of poor research culture

*Poor research culture e.g. over-reliance on metrics; compromises on rigour and integrity; undervaluing of negative results and of replication studies; lack of transparency around hiring and promotions; barriers to diversity and inclusion*

*‘The relentless drive for research excellence has created a culture in modern science that cares exclusively about what is achieved and not about how it is achieved.’*

*- Jeremy Farrar,  
Director, Wellcome*

*Poor research culture e.g. unhealthy competition; bullying and harassment; poor management practice; stress and anxiety; mental health issues; impact on personal relationships; isolation*

THE  
ROYAL  
SOCIETY

*‘Highly competitive environment combined with the very narrow definitions of success’*

# Key aspects of achieving researcher wellbeing and research success are under-recognised

## Breaking the barriers

Women's retention and progression in the chemical sciences

### Progress is dictated by narrow definitions of excellence

- ▼ There were concerns that current definitions of excellence in science are narrow and outdated.
- ▼ The research world is changing and there is broad recognition that the 'publish or perish' model is redundant. Yet among our respondents, it is still perceived to be the primary driver of career progression.
- ▼ Funding and promotion decisions are driven by research output. Efforts and successes in areas including teaching, pastoral responsibilities and academic citizenship activities, including Athena SWAN and REF (Research Excellence Framework) preparation do not 'count' towards promotion prospects.
- ▼ Women reported being more heavily involved with activities in these undervalued areas than their male counterparts.
- ▼ A number of respondents questioned whether women should actively avoid contributing to non-research activities; others said that science would suffer as a result.

**CAREER**

*Recognising broader contributions  
and reliance on qualitative assessment  
methods are central to research assessment  
reform*

# Agreement

- Assessment processes relying predominantly on journal- and publication-based metrics **can be a hurdle to the recognition of diverse contributions and may negatively affect the quality and impact of research.** They also **contribute to an unhealthy research culture and an unaffordable publication system.**
- Building on progress made so far (DORA, Leiden Manifesto, Hong Kong Principles), the Agreement **establishes a common direction for research assessment reform**, while respecting organisations' autonomy. It is based on **shared principles, 10 commitments**, and a **timeframe** (1 & 5 years) for reforms.
- Agreement published on 20 July 2022.

**539 validated  
signatories**  
as of 04 May 2023

## Core commitments

1. **Recognise the diversity of contributions** to, and careers in, research, in accordance with the needs and the nature of the research.
2. **Base research assessment primarily on qualitative evaluation for which peer-review is central**, supported by responsible use of quantitative indicators.
3. **Abandon the inappropriate uses in research assessment of journal- and publication-based metrics**, in particular the inappropriate uses of journal impact factor (JIF) and *h*-index.
4. **Avoid the use of rankings of research organisations** in research assessment.

# Coalition for Advancing Research Assessment

Our vision is that the assessment of research, researchers and research organisations recognises the diverse outputs, practices and activities that maximise the quality and impact of research. This requires basing assessment primarily on qualitative judgement, for which peer review is central, supported by responsible use of quantitative indicators.

# Coalition for Advancing Research Assessment

- **Mission: Enable systemic reform of research assessment** on the basis of common principles and commitments within an agreed timeframe, as set in the Agreement on Reforming Research Assessment.
- **Offers a space for its members (signatories of the Agreement) to learn from others' experiences**, to advance the process of research assessment reform in Europe and beyond.
- The **Constitutive Assembly**, the first meeting of the General Assembly of members of the Coalition, took place on 1 December 2022.
- Coalition members have now been invited to be involved in **Working Groups** with the aim to achieve the Commitments and CoARA's mission.

**465 member organisations**  
as of 04 May 2023

**Just 10 UK members,  
only 4 UK universities**

### Résumé for Researchers

Opening up conversations about researcher evaluation

Résumé for Researchers has been created to support the evaluation of individuals' varied contributions to research. Find out more about the background to the tool [in our blog](#).

Sustained excellence in research requires a range of contributions

*Exploring 'new' qualitative methods presents opportunities for better assessing how research is done, but challenges remain for their implementation*

# Assessing how research is done?

**REF 2021** Research Excellence Framework

REF 4, 5 Environment

UNIVERSITY OF ABERDEEN

- Description of research environment, facilities, E&D arrangements, open access, support for interdisciplinarity and research integrity, sustainability and vitality of submitting unit
- Two environment statements: a short, institutional statement that describes **institutional/central policies and measures** and a longer, unit of assessment based statement that describes the policies, processes and measures in place **within the submitting unit**.
- **REF metrics:** research income, research income in kind and number of doctoral degrees awarded between 1 August 2013 to 31 July 2020 (from HESA)

## Exploring research integrity indicators: A new project by UKRI, Cancer Research UK and GuildHE

by Rachel Persad | Dec 9, 2021 | Projects

We are pleased to announce a new collaboration between UKRI, Cancer Research UK and GuildHE, to explore what indicators of research integrity exist, or could be proposed, that are valid, reliable, ethical and practical, and to open a national and international discussion on next steps. We see this area as a growing policy priority, and this project will inform the work of the recently-established UK Committee on Research Integrity.

# Should/can ‘how research is done’ be captured in quantitative metrics?

## THE BIBLIOMAGICIAN

Comment & practical guidance from the LIS-Bibliometrics community

AUGUST 21, 2018

### Measuring openness: should we be careful what we wish for?

*Is the best way of incentivising open scholarship to measure it? Lizzie Gadd is not so sure.*

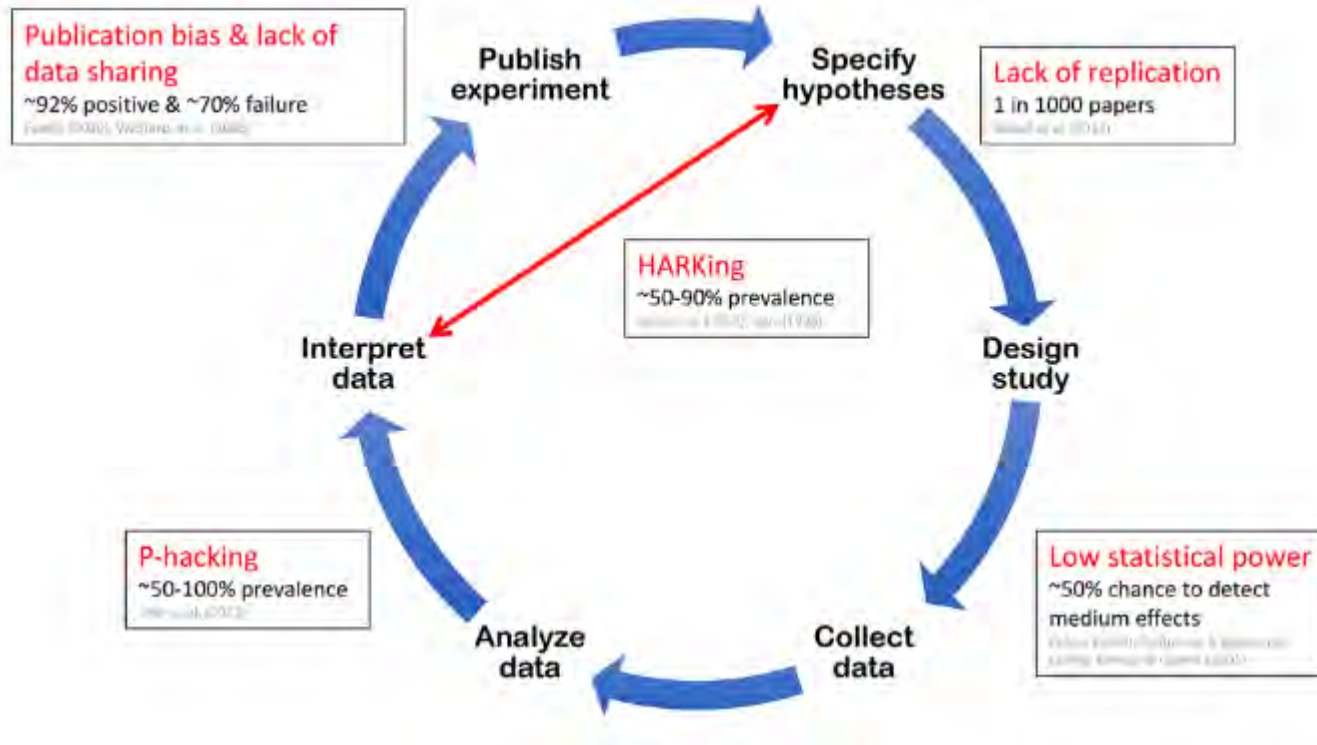

1. **Openness and quality are not the same thing**
2. **Measuring openness and quality leads to double the metrics**
3. **Is openness mature enough to be measured?**
4. **Openness should be its own reward**

*“As a general rule of thumb, we suggest the use of quantitative indicators for quantitative things: publications, money, citations and students, and qualitative indicators for qualitative things: excellence, quality, value, impact.” – Lizzie Gadd*

# Exploring how to better capture process, behaviours and competencies

# Competency-based approaches are prevalent in other sectors...

**HAYS** Recruiting experts worldwide

## WHAT'S THE DIFFERENCE BETWEEN A SKILL AND A COMPETENCY?

Visit our blog to find out more  
[social.hays.com](https://social.hays.com)

**SKILLS** are the specific learned abilities that you need to perform a given job well, such as:

**CODING**

**HANDLING ACCOUNTS**

**WRITING TENDERS**

**COMPETENCIES** are the knowledge and behaviours that lead you to be successful in a job, such as:

**PROBLEM SOLVING**

**STRATEGIC PLANNING**

**NEGOTIATION**

Make better decisions with **competency based** recruitment

**Zoho** Recruit

# ... but are underused in assessing research process and culture in academia

**Open science** – can you give an example of where others have build on your data or research and highlight any specific efforts on your part for them to do so?

**People management** – can you give an example of where you had to motivate an employee who was showing performance issues, how did you go about this and what was the outcome?

**Research integrity** – can you give an example of an occasion where you had doubts about soundness of your own work or that of a colleague, how did you address this and what was the outcome?

**Collaboration / teamwork** – can you give an example of a situation where you had a disagreement with a colleague, how did you handle this and what was the outcome?

**Financial management** – can you give an example of a situation where you experienced challenges delivering a project to time and/or budget, how did you resolve these?

Could also lead to...

- decreasing the gap between academic and support / research management staff
- improving two-way intersectoral mobility

# Challenges for introducing competency-based approaches

“Quantitative approaches are objective, qualitative approaches are subjective”

“We cannot hire people because they are ‘kind’”

“People can just invent their answers”

“We’ll end up hiring the people who can bring the most convincing stories”

- **Quantitative metrics are not bias-free** (since there are biases throughout the publication process), and hence not objective – all forms of assessment are subjective to some extent
- **Being able or competent is not the same as being kind**
- **People also invent data** (which arguably is worse)... - the benefit of narratives is that you likely will still learn a lot whether truthful or not
- **No one would suggest these as the only tool**, of course peer review and other existing practices that the community deems appropriate and valuable should be retained

# Utility of qualitative/quantitative assessment methods at different aggregate levels

The weight of qualitative (peer evaluation) and quantitative (bibliometrics) methods as function of the aggregation level

NOR-CAM - A toolbox  
for recognition and rewards  
in academic careers

U:R Universities  
Norway

*“Bibliometrics do not understand varying contexts” - Metrics in individual-level assessments - Advice to research organizations and their leadership from The National Board of Scholarly Publishing (Norway)*

# What I hope you'll take away today

- **Research assessment reform is a central lever** to maximising research quality and impact and **to improving research culture** (if it can result in better aligning science and career success)
- Recognising broader contributions and **reliance on qualitative assessment methods** are **central to research assessment reform** (and many organisations have committed to *this* reform)
- Exploring 'new' **qualitative methods** in particular **presents opportunities for better assessing how research is done** (but lots of efforts will be needed to overcome challenges with their development, acceptance and implementation)

# How can individual researchers contribute to research assessment reform?

Join the conversation – organise a [café culture](#) discussion

Share your insights and opinions – participate in research on research

Change expectations – help shape what success means

Become an ambassador for change – raise awareness of DORA and [coara.eu](#)

Consider broad criteria in research(er) assessment – be a responsible assessor

(Biomedical) researchers suggest rewarding team effort, providing 360 feedback and use of narratives for **assessment of relational responsibilities** (collaboration, supervision, teaching)

- **relational responsibilities should ideally play a more prominent role in future assessment criteria** as they correspond with and aspire the practice of responsible research
- participants gave several suggestions how to make these skills quantifiable and assessable
- **the development of these criteria is still in its infancy**, implementation can cause uncertainties among those assessed and consequently, future research should focus on how to make these criteria more tangible, concrete and applicable in daily practice
