Foreword: the 2019 revision of *The Concordat to Support Research Integrity*

On 25 October 2019, the Concordat Signatories Group published [a revised version of *The Concordat to Support Research Integrity*](#).

UKRIO sees this revision of the Concordat as an important step in safeguarding and improving standards in UK research, as research quality is inextricably linked to research integrity.

Responding to an inquiry by the House of Commons Science and Technology Committee, the revised Concordat clarifies what is required from researchers, employers of researchers and funders of research to help ensure that the highest standards of rigour and integrity are maintained.

UKRIO holds an Observer role on the Concordat Signatories Group and the updated Concordat was developed with the assistance of our unique expertise and experience. We will continue to work with the signatories of the Concordat to help implement its requirements and provide feedback to inform its future development.

UKRIO's Self-Assessment Tool was written for the 2012 version of the Concordat and is being updated to reflect the new requirements of the revised 2019 edition.

Given that the 2019 Concordat retains the five core commitments of the 2012 version, this version of our Self-Assessment Tool is very much applicable to the new edition of the Concordat. However, it will not reflect every single revision and therefore additional advice should be sought from UKRIO when using this document with the 2019 version of the Concordat.

The 2019 edition of the Concordat is available from the Universities UK website:

<https://www.universitiesuk.ac.uk/policy-and-analysis/reports/Documents/2019/the-concordat-to-support-research-integrity.pdf>

If you would like our support in embedding the revised Concordat in the systems and practices of your research or your organisation, [please contact us](#)

Introduction

This self-assessment tool has been developed to help institutions identify areas of their research practices, systems and policies, researcher development and monitoring that may need revision in order to adhere to the requirements and recommendations of *The Concordat to Support Research Integrity*. While the Concordat addresses three key stakeholders involved with research – the researcher, employer and funder – this self-assessment tool focuses on the responsibilities of institutions that employ researchers.

It is a long-standing expectation that all involved in research must meet the highest standards of good practice and ethical conduct. Research integrity is an inherent part of professional conduct. It goes beyond meeting the standards of regulatory and contractual requirements. The Concordat recognises this and was not created to encourage a ‘tick box’ approach to these issues. Accordingly, UKRIO believes strongly that individual and institutional responses to the Concordat should not focus solely on fulfilling contractual and other obligations. While these obligations must be met, the aim should be the broader implementation of the Concordat’s commitments.

This self-assessment tool will allow institutions to consider how they might carry out such a broad implementation, building on their existing activities. Guidance is given on every aspect of the Concordat but particular attention has been paid to areas where UKRIO has most often been approached for guidance, in the hope of passing on lessons learned to the research community. Use of the self-assessment questions will not only help with the implementation of the Concordat, but also enhance an institution’s overall approach to research integrity and help ensure that important issues have not been overlooked.

Thematic approach

The Concordat sets out five high-level commitments which all involved in research must meet. Rather than repeat the Concordat verbatim, this document identifies five key themes which cut across those commitments. Taking each of these key themes in turn, this document poses self-assessment questions for institutions, each mapped onto one or more commitments of the Concordat (summarised in the next section). For each question, this document also introduces practical ways in which they might be met under the heading ‘possible evidence’.

This approach groups related issues together, allowing a focus on strong recommendations and broad areas for action. It also reduces duplication, as there is a degree of overlap between the broad commitments of the Concordat.

Advisory, not prescriptive

A national, high-level framework such as the Concordat must be implemented with regard to local research environments and conditions. Our aim is **not** to suggest a ‘one size fits all’ approach or impose inflexible solutions. Rather, we hope that this self-assessment tool will help institutions consider how the Concordat can best be implemented in their particular settings, and how it might be used to promote and sustain research integrity.

An opportunity for review and reflection

The Concordat was developed to sustain and enhance the integrity of UK research in the long term, and to make current institutional assurance more visible. It builds upon existing standards and guidance for research practice and, consequently, much of what it says may appear familiar. However, organisations should not assume that they are already adhering to its commitments.

Not only does the Concordat contain new requirements and recommendations, but UKRIO has observed that there can often be gaps in existing institutional provisions for research integrity. Institutions might fall short of meeting certain standards or lack information on whether all of their provisions are effective. In our experience, a strong professional ethos drives most research in the UK. But there is no reason for complacency. Institutions must satisfy themselves that their existing measures are effective. The Concordat also provides them with an opportunity to consider how these measures might be built upon, to ensure a more visible and joined-up approach to supporting research integrity.

Annual statement

The final commitment of the Concordat recommends that institutions make an annual statement on research integrity to their governing body. It also recommends that this statement be made public.

Annex I discusses what might be included in the annual statement. It is intended as a guide to inform the drafting of an annual statement, rather than instructions that ‘must’ be followed. It is up to institutions to determine what their statements will contain.

Note that [the 2019 edition of the Concordat](#) requires employers to produce an annual statement on research integrity and to make it public; it is no longer a recommendation.

A ‘living document’

As organisations develop their research practices to implement the Concordat, and funding bodies develop processes to assess compliance, we expect this self-assessment tool to evolve. The intent is that it will be a ‘living document’, subject to periodic review and revision to reflect emerging best practice in this area. UKRIO welcomes feedback on the content and use of this document. Please submit any comments or suggestions via our website www.ukrio.org.

Footnote

Please note that this self-assessment tool was developed independently by UKRIO. It does not necessarily represent the views of the Concordat’s authors or signatories, nor is it endorsed or warranted by them.

Five key themes of the Concordat

The five key themes we have identified in the Concordat are:

1. **Policies and systems**
2. **Dissemination**
3. **Culture and development**
4. **Addressing research misconduct**
5. **Monitoring and reporting**

Taking each of these key themes in turn, this document poses self-assessment questions for institutions, each mapped onto one or more commitments of the Concordat. For each question, the document also introduces practical ways in which they might be met under the heading 'possible evidence'.

As noted in the introduction, this self-assessment tool should not be seen as prescriptive but as a guide to inform the implementation of the Concordat. It is up to employers and their researchers to determine the best way to do so in their particular research environment

It should also be noted that the 'possible evidence' is for use by institutions as part of the self-assessment process. It is **not** suggested that this level of information must be collated and provided to external bodies. Rather, it can be used to inform institutional statements on the implementation of the Concordat and, indeed, other internal and external requirements for assurance about research integrity.

Summary of the Concordat's commitments (2012 edition)

1. Maintaining standards

Commitment #1: We are committed to maintaining the highest standards of rigour and integrity in all aspects of research.

2. Ethical and other frameworks

Commitment #2: We are committed to ensuring that research is conducted according to appropriate ethical, legal and professional frameworks, obligations and standards.

3. Culture of integrity

Commitment #3: We are committed to supporting a research environment that is underpinned by a culture of integrity and based on good governance, best practice and support for the development of researchers.

4. Research misconduct

Commitment #4: We are committed to using transparent, robust and fair processes to deal with allegations of research misconduct should they arise.

5. Strengthening integrity

Commitment #5: We are committed to working together to strengthen the integrity of research and to reviewing progress regularly and openly.

Policies and systems

Annex I: suggested annual statement content

The Concordat (2012) recommends that institutions make an annual statement to their governing body on the actions they have undertaken to sustain and further enhance integrity in their research. It also recommends that institutions make their statements public. The annual statement is a valuable opportunity for internal review and reflection. Equally, it is an opportunity to demonstrate publicly a commitment to high quality and ethical research, by declaring the practical measures which an institution has undertaken to support research integrity.

Note that [the 2019 edition of the Concordat](#) requires employers to produce an annual statement on research integrity and to make it public; it is no longer a recommendation.

The Concordat to Support Research Integrity (2012)

Commitment #5: We are committed to working together to strengthen the integrity of research and to reviewing progress regularly and openly.

...**employers of researchers** should present a short annual statement to their own governing body that:

- provides a summary of actions and activities that have been undertaken to support and strengthen understanding and application of research integrity issues (for example postgraduate and researcher training, or process reviews)
- provides assurances that the processes they have in place for dealing with allegations of misconduct are transparent, robust and fair, and that they continue to be appropriate to the needs of the organisation
- provides a high-level statement on any formal investigations of research misconduct that have been undertaken

To improve accountability, and provide assurances that measures being taken continue to support consistently high standards of research integrity, this statement should be made publicly available.

Drawing on UKRIO's extensive experience, and feedback from institutions and researchers, this annex suggests possible content for the annual statement. As noted earlier, the self-assessment tool should not be seen as prescriptive. Accordingly, this annex is intended as a guide to inform the drafting of an annual statement. It is up to institutions to determine what their statements will contain. Like the rest of this document, this annex will be revised as the implementation of the Concordat evolves. UKRIO welcomes enquiries from institutions seeking advice on the content of their annual statements and is happy to assist its subscribers in drafting them.

Writing the annual report

The annual report should provide a brief but wide-ranging summary of activities undertaken to support research integrity, including addressing any allegations of misconduct. The report should not be limited to activities which relate specifically to the implementation of the Concordat, let alone to those which relate only to compliance with the Concordat, or with other guidance, as a condition of grant.

This is not to diminish the importance of contractual and other mandatory standards. The annual statement can certainly be used to demonstrate that these are being met, in particular the ‘responsibilities of employers of researchers’ listed in the Concordat. However, it can – and, in UKRIO’s view, *should* – also demonstrate a broader commitment to the promotion of research integrity. If for any reason a contractual or other required standard is not being met, the report should contain a brief summary of what is being done to address this and a proposed completion date. For example: “The publicly accessible web link to our research integrity policies and the named person for receiving allegations of misconduct is not yet in place. This will be rectified by the beginning of the next semester.”

It may be challenging to summarise a year’s worth of research integrity support in a brief and accessible form. However, merely listing activities undertaken should be avoided. It would be helpful not only to say what has been done, but the reasons for actions taken and the outcome. For example: “Drawing on lessons learned from a recent investigation of research misconduct, we have undertaken additional activities to raise awareness of the sources of help on research practice and ethics available to researchers. Downloads of relevant policies and visits to our institutional research integrity web pages subsequently increased.”

The annual statement is also an opportunity to highlight how existing measures and previous actions are being built upon or further developed. As successive annual statements are published by an institution, we feel it would be helpful if they had a strong focus on new measures and significant changes to existing measures, rather than simply echoing what has gone before. Previous statements should remain available on the institution’s website.

Suggested content: supporting and strengthening research integrity

- Evidence of how your institution is implementing the commitments of the Concordat, including compliance with its ‘responsibilities of employers of researchers’. For example:
 - An overview of your institution’s strategy and objectives to strengthen understanding of research integrity.
 - Introduction or revision of research integrity policies and procedures, requirements, process reviews or support mechanisms.
 - Revision of related institutional systems (e.g. financial audit process or whistleblowing policy).
 - Inclusion of relevant external requirements and guidance into institutional processes.
 - Dissemination and awareness-raising activities that you have undertaken.
 - A summary of your education and training provision, including the audiences that have been reached and any new activities.

Annex I: suggested annual statement content

- Information on any research into research integrity or related fields, such as research ethics, undertaken by members of your institution.
- A description of your internal monitoring and audit processes, including information on any revisions or developments, plus summary data.
- Summary of outcomes of any external inspections/ audits.

Suggested content: addressing research misconduct

- Confirmation that:
 - Your institution has a processes for the reporting and investigating of allegations of research misconduct.
 - The process has appropriate principles and mechanisms to ensure that investigations are thorough and fair, carried out in a transparent and timely manner, and protected by appropriate confidentiality.
- Brief, anonymised summary data on any formal investigations conducted by your institution into allegations of research misconduct. For example:
 - Number of formal investigations undertaken in the past year, including:
 - How many allegations were upheld in full or in part?
 - How many allegations were dismissed?
 - The number of ongoing investigations.
 - A breakdown of the number of formal investigations undertaken in the past year:
 - By discipline.
 - By the broad type of misconduct that was alleged. For example, fabrication/ falsification, plagiarism or failure of duty of care to research participants.
 - For allegations that were externally funded, a breakdown by funding body.
 - **Please note that:**
 - Specific allegations/ investigations and the individuals and research projects concerned should **not** be identifiable from this data.
 - Regarding the number of formal investigations undertaken, how many allegations were upheld or dismissed, and the breakdowns by discipline, type and funder, it is UKRIO's view that there is no 'right' or 'wrong' answer as long as the data provided is accurate. This has been echoed by other bodies with interests in this area, for example Research Councils UK in its 2014 *Research Integrity Assurance Questions*.
- Confirmation that the institution fulfilled any requirements to make reports to external bodies, including regulatory and professional bodies, regarding the initiation or completion of a formal investigation. In our view, there is no need to provide additional information in the annual statement,

Annex I: suggested annual statement content

simply to confirm that the institution has met its obligations. External bodies may require additional confirmation separately from the annual statement, for example via their assurance or audit processes.

- A short summary of key learning points from concluded investigations and subsequent actions taken. For example: revision of systems or policies, training on particular aspects of the research process or improvements to dissemination of expected standards.
 - **Please note that** it is not suggested that disciplinary or other actions taken in relation to specific individuals is listed. However, if the institution has previously made any public statements that mentioned such actions, these could be linked to.

Suggested content: external engagement

- Collaborations with external organisations to support and strengthen understanding and application of research integrity issues, whether UK-based institutions or those from other countries.
- Regional, national or international initiatives on research integrity which your institution has contributed to or participated in.
- Public engagement activities conducted by your institution, particularly involving research participants or patients, which included coverage of research integrity.
- External conferences, workshops or other events on research integrity to which your institution has contributed.
- Membership of, or collaborations with, organisations with a particular interest in research integrity and related issues. For example, the Association for Research Ethics, the Committee on Publication Ethics or UKRIO.

Suggested content: funder-specific activities

- A summary of any actions taken to safeguard and support research integrity relating to researchers and projects supported by particular funding bodies.
 - **Please note that** you may prefer to list funder-specific activities as subsets of relevant general activities instead of listing them in a separate section. For example, a description of your 'generic' training and development activities could be followed by a summary of training provided for researchers supported by a particular funder.

The UK Research Integrity Office (UKRIO) is an independent charity, offering support to the public, researchers and organisations to further good practice in academic, scientific and medical research. We pursue these aims through our publications on research practice, the support and services we provide to organisations, our education and training activities, and by providing expert guidance in response to requests for assistance.

Since 2006, UKRIO has provided independent, expert and confidential support across all disciplines of research, from the arts and humanities to the life sciences. We cover all research sectors: higher education, the NHS, private sector organisations and charities. No other organisation in the UK has comparable expertise in providing such support in the field of research integrity.

UKRIO welcomes enquiries on any issues relating to the conduct of research, whether promoting good research practice, seeking help with a particular research project, or concerns about alleged fraud and misconduct in research.
